## SUMMARY

Fullstack engineer with 3+ years of experience building web applications across TypeScript, PHP, and .NET. Currently developing and maintaining a scalable multitenant vehicle monitoring platform, modernizing a legacy single-client system into a SaaS-oriented architecture while handling real-time telemetry, alerting, large-scale database optimization, and production deployment.

## WORK EXPERIENCE

**PT Lalu Lintas Lancar (Treffix.id)** — Tangerang, Indonesia

Jan 2026 – Present

*Fullstack Developer*

- Dedicated fullstack developer for V2 of the company's vehicle monitoring platform, migrating a single-client system into a multitenant SaaS architecture with isolated tenant data and configuration.
- Built backend APIs and business logic using Elysia (TypeScript), Prisma, MySQL, and MongoDB with Mongoose, covering authentication, authorization, roles, tenants, fleet groups, vehicles, monitoring, alerts, and transactions.
- Developed the monitoring dashboard in Next.js, React, and TypeScript with Ant Design and Tailwind CSS, including real-time vehicle tracking, filtering, pagination, alerting, and management interfaces.
- Integrated the platform with Teltonika GPS tracking devices, configuring the trackers directly and coordinating with field technicians to produce accurate and reliable tracking data.
- Optimized MongoDB indexing and query patterns on collections holding tens of millions of records to keep monitoring and alert workloads responsive.
- Restructured the codebase using clean architecture principles, separating business logic from infrastructure to improve maintainability and overall application performance.
- Handled deployment and infrastructure using Docker, Bun, GitLab Container Registry, and Nginx, including production troubleshooting, while maintaining the existing client system alongside V2.

**PT Arkamaya** — Bandung, Indonesia

Jul 2023 – Dec 2025

*Fullstack Engineer*

- Developed enterprise manufacturing and HRIS applications for clients including Toyota (TMMIN, TAM) using Vue 3 and TypeScript on the frontend and .NET Core clean architecture on the backend.
- Collaborated with designers and QA engineers to deliver real-time, lightweight applications that met production-floor requirements.
- Translated requirement documents into working features and supported users through implementation, launch, and post-deployment stabilization.

**PT Solusi Kampus Indonesia (eCampuz)** — Yogyakarta, Indonesia

Jun 2022 – Nov 2022

*Fullstack Engineer – Intern*

- Built a course scheduling system with Laravel and Vue.js, implementing a genetic algorithm for schedule generation, JWT-based authentication, and database migrations for schema management.
- Presented scheduling data through a matrix-based Vue.js interface and handled bug fixing and weekly documentation reporting.

## SIDE PROJECTS

**Ticket Booking and Order System** — Freelance

2026

*PHP, CodeIgniter 4, MySQL, Xendit, Wablas*

- Built a ticket booking and order management system covering the full flow from ticket selection and order creation to payment confirmation and customer notification.
- Integrated Xendit as the payment gateway for transaction processing and status handling, and Wablas as the WhatsApp gateway for delivering order and payment notifications to customers.
- Moved recurring tasks such as notification delivery and order status checks to scheduled jobs run through an external cron service, keeping them out of the main request flow.

- Developed a company landing page on a customized WordPress theme and plugin structure, delivering a responsive layout across device sizes.
- Built a custom CMS with four CRUD modules and an admin dashboard so administrators could manage dynamic landing page content without code changes, and handled site configuration and production deployment.

SELECTED PROJECTS

- **Vehicle Monitoring Platform V2, Treffix.id (2026)** — Multitenant vehicle monitoring platform built with Elysia, Next.js, Prisma, MySQL, and MongoDB, covering real-time tracking, alerting, and fleet management for multiple tenants.
- **Quality Information System, TMMIN (2025)** — Modernized the legacy system using Nest.js and Vue 3 (TypeScript), redesigning the database schema for better performance, scalability, and maintainability.
- **HRIS, PT Toyota Astra Motor (2025)** — Developed a monolithic HRIS application with .NET Core and repository-pattern architecture, covering prospective employee data and career development planning.
- **HRIS, TMMIN (2024)** — Built a web application using ASP.NET MVC, Toyota Development Kit (TDK), and Vue 3 with responsive modules for employee data, performance assessment, and career planning.
- **Vehicle Inspection System, TMMIN (2024)** — Developed a mobile-first system with Vue 3 and .NET Core 8, enabling inspection and defect recording directly from mobile devices on the production floor.
- **Legacy QIS Integration, TMMIN (2024)** — Integrated the legacy system (PHP 5, CodeIgniter 3) with the new inspection application and added a statistical dashboard for production quality insights.
- **Invoicing Management System (2023)** — Built with .NET Core 8 and Vue 3, featuring automated invoice calculation, invoice generation, and financial reporting.
- **Machine Trouble Ticketing, TMMIN (2023)** — Vue.js tablet application with offline mode, multi-level approval workflows, and continuous countermeasure tracking.
- **HRIS, PT Sido Muncul (2023)** — Supported development of master data modules using CodeIgniter 3.
- **Garbage Truck Tracking, DLHK Kota Bandung (2023)** — Maintained and enhanced the system with CodeIgniter 4, adding a downloadable report module with improved data visualization.

SKILLS

- **Frontend:** TypeScript, JavaScript, Vue 3 (Pinia), React, Next.js, Ant Design, Tailwind CSS, Bootstrap, HTML, CSS
- **Backend:** Node.js, Elysia, Bun, Nest.js, .NET Core, ASP.NET, PHP, Laravel, CodeIgniter 3 and 4, REST API design
- **Database:** MySQL, SQL, MongoDB, Mongoose, Prisma, schema design, indexing and query optimization
- **DevOps and Tools:** Docker, Nginx, RabbitMQ, GitLab CI and Container Registry, Git, Figma
- **Soft Skills:** Problem solving, effective communication, teamwork and collaboration, attention to detail

EDUCATION

- Binus Online Learning** — Indonesia

May 2024 – May 2028 (Expected)

*Undergraduate in Information System*

  - Focused on the software development life cycle and its application to efficient, maintainable software delivery.
- SMK Telkom Malang** — Malang, Indonesia

Jun 2020 – May 2023

*Vocational High School Diploma in Software Engineering*
